Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A ~~process of manufacturing, the process method~~ comprising, providing electrical circuitry, subsequently moulding an electronic device cover member for an electronic device on to the electrical circuitry, and providing on the electronic device cover member an integral electrical connector structure for connecting the electrical circuitry to an electronic component, wherein the providing on the electronic device cover member an integral electrical connector structure comprises forming the integral electrical connector structure with the cover member in a mould, wherein the integral electrical connector structure is configured to removably receive at least a portion of a mating connecting member of the electronic component therein in the integral electrical connector structure.

2. (Currently amended) A ~~process method~~ according to claim 1, wherein the ~~step moulding of incorporating the electronic device cover member on to the~~ electrical circuitry ~~into the cover member~~ comprises forming an electrical circuitry element, arranging the electrical circuitry element in ~~[[all]]~~ the mould and moulding the cover member onto the electrical circuitry element.

3. (Currently amended) A ~~process method~~ according to claim 2, wherein the moulding of the cover member comprises introducing

Appl. No.: 10/603,913

Reply to Office Action of: 11/14/2008

a plastics material into the mould after the electrical circuitry element is arranged in the mould, ~~and forming the connector structure with the cover member in the mould.~~

4. (Currently amended) A ~~process~~ method according to claim 3, wherein the plastics material is introduced into the mould by injection.

5. (Currently amended) A ~~process~~ method according to claim 1, wherein the ~~step~~ moulding of ~~incorporating~~ the electronic device cover member on to the electrical circuitry ~~into the cover member~~ comprises forming a first part of the cover member in a first moulding operation, and forming a second part of the cover member in a second moulding operation, the second moulding operation comprising forming the electrical circuitry by forming a precursor for the electrical circuitry, and thereafter applying an electroconductive material to the precursor ~~to form the electrical circuitry.~~

6. (Currently amended) A ~~process~~ method according to claim 5, wherein the integral connector structure is formed on the second part during the second moulding operation.

7. (Currently amended) A ~~process~~ method according to claim 5, wherein the first moulding operation comprises introducing a first plastics material into the first part of the mould.

8. (Currently amended) A ~~process~~ method according to claim 5, wherein electroconductive material is a metallic material.

9. (Currently amended) A ~~process~~ method according to claim 5, wherein ~~a step of~~ the applying of the electroconductive

Appl. No.: 10/603,913  
Reply to Office Action of: 11/14/2008

material comprises plating the electroconductive material onto the precursor.

10. (Currently amended) A ~~process~~ method according to claim 9, wherein the ~~step of~~ plating of the electroconductive material consists of one or both selected from electroplating and electroless plating.

11. (Currently amended) A ~~process~~ method according to claim 9, wherein the second moulding operation comprises introducing a second plastics material into the mould, the second plastics material carrying a seeding substance to seed the plating of the electroconductive material onto the precursor, the seeding substance comprising metallic particles.

12. (Currently amended) A ~~process~~ method according to claim 1, wherein the ~~step moulding of incorporating the electronic device cover member on to the~~ electrical circuitry into the ~~cover member~~ comprises providing a substrate, forming a precursor for the electrical circuitry on the substrate, moulding the substrate to form the cover member and then applying an electroconductive material to the precursor to form the electrical circuitry.

13. (Currently amended) A ~~process~~ method according to claim 12, wherein the ~~step of~~ applying of the electroconductive material comprises plating the electroconductive material onto the precursor.

14. (Currently amended) A ~~process~~ method according to claim 13, wherein the ~~step of~~ plating of the electroconductive

Appl. No.: 10/603,913

Reply to Office Action of: 11/14/2008

material consists of one or both selected from electroplating and electroless plating.

15. (Currently amended) A ~~process~~ method according to claim 13, wherein the ~~step of~~ forming of the precursor comprises applying a carrier material to the substrate, the carrier material carrying a seeding substance to seed the plating of the electroconductive material onto the precursor, the secondary substance comprising metallic particles.

16. (Currently amended) A ~~process~~ method according to claim 15, wherein the carrier material comprises an ink and the ~~step of~~ applying of the carrier material to the substrate comprises printing the carrier material on the substrate.

17. (Currently amended) A ~~process~~ method according to claim 12, wherein the substrate comprises a plastics material and the ~~step of~~ moulding of the substrate to form the cover member comprises vacuum or press moulding the substrate.

18. (Currently amended) A ~~process~~ method according to claim 12, wherein the ~~step of~~ providing of the connector structure on the cover member comprises moulding the connector onto the cover member after the substrate has been moulded to form the cover member.

19. (Currently amended) A ~~process~~ method according to claim 1 comprising providing a flexible holding member in the connector structure to hold the electronic component in electrical communication with the electrical circuitry.

Appl. No.: 10/603,913

Reply to Office Action of: 11/14/2008

20. (Currently amended) A process method according to claim 19, wherein the flexible holding member comprises a resilient member.

21-32. (Cancelled)

33. (Withdrawn) A process method ~~of manufacturing an electronic device cover, the process~~ comprising:

forming an electronic device cover member;

incorporating electrical circuitry into the cover member during the forming of the cover member; and

providing on the cover member an electrical connector structure for connecting the electrical circuitry to an electronic component, wherein the electrical connector structure is integrally formed with the cover member during the incorporating of the electrical circuitry into the cover member ~~during the forming of the cover member~~, and wherein the electrical connector structure comprises an opening, wherein the opening forms an electrical connector receiving area, and wherein the electrical connector receiving area is configured to receive at least a portion of a connecting member of the electronic component therein.

34. (Currently amended) A process method as in claim 1 wherein forming the electronic device cover member for an electronic device comprises forming a mobile phone cover member, wherein the electrical circuitry is incorporated into the mobile phone cover member during the formation of the mobile phone cover member, and wherein the mobile phone cover member comprises the integral connector structure.

Appl. No.: 10/603,913  
Reply to Office Action of: 11/14/2008

35. (Withdrawn) A ~~process~~ method as in claim 33 wherein forming the electronic device cover member comprises forming a mobile phone cover member, wherein the mobile phone cover member is moulded on to the electrical circuitry, and wherein the connector structure is integrally formed with the mobile phone cover member.
